

INSULATED ROOF PANELS

STRESS-SKIN

NAILBASE

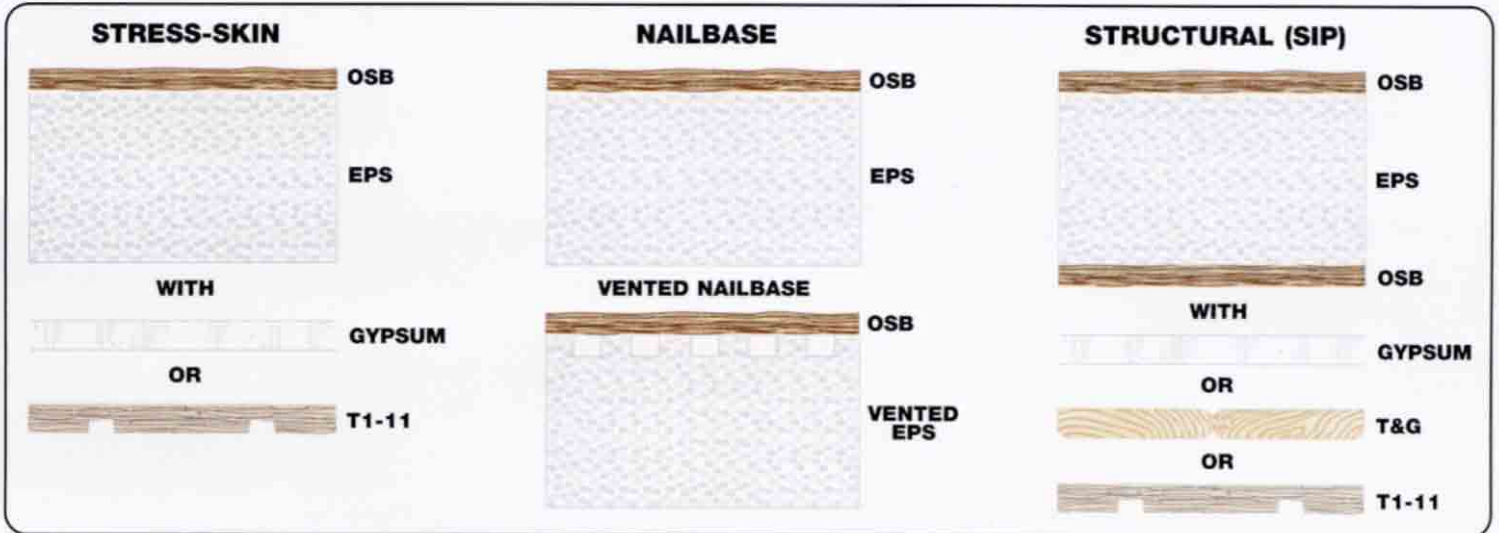

STRUCTURAL

Pacemaker Insulated Roof Panels ...

Combine framing, insulation and roof sheathing into one easy-to-install component.

Factory assembled composite panels for residential, educational, religious and many types of commercial structures. Nail Base, Stress-Skin or Structural Panels are provided with an OSB top facer which allows shingles, shakes, metal, adhered membranes or other roofing materials to be attached. The underside facer meet decorative, structural and/or fire resistance specifications.

Pacemaker produces the UL listed expanded polystyrene (EPS) cores which provide stable, high R-value insulation for the roof. Wire chases within the cores and various edge treatments are available as specified.

Durable

Oriented Strand Boards, EPS cores, gypsum, T1-11 and T&G planking are standard construction materials we combine into composite panels. Thousands of projects built with these materials have performed well for many years.

Experience

Pacemaker has experience in supplying composite panels for thousands of projects since 1975.

Service & Delivery

Experienced estimators process accurate quotations promptly... and at no charge. Skilled employees with proprietary equipment produce panels to meet your construction schedule in our 125,000 SF of manufacturing space.

Technical Support

For design assistance, load charts, panel sizes, construction details, code listings or information call 1-800-446-2188 or e-mail: info@pacemakerplastics.com

Cost Saving

Fewer roof framing members may be needed with large Structural Panels. EPS insulation core lowers energy usage. Composite panels reduce installation labor.

High Quality

Underwriters lab (UL) and PFS/TECO quality control procedures cover all components and manufacturing operations. In-process inspection assures tight tolerances and adherence to specifications.

Environmental

Stable, high R-value EPS cores (with no CFCs) save energy and reduce pollution. OSB wood facers are made from fast growing trees, not old-growth timber.

Accessories

Pacemaker can provide adhesive/sealant, proper screws to penetrate wood or steel structurals, wood I-joists and various types of splines.
